

STRATEGIC ANALYSIS

Project Magist

Logistics-Audit & Brand entry in Brazil

Team Where Apple?

The Decision

Conditional "GO"

We recommend entering the market via Magist, but with a **geographical pilot phase** and strict contractual performance guarantees (Service Level Agreements) for our tech categories.

Logistics Performance

Core-Periphery Structure

Urban clusters (São Paulo, Minas Gerais) deliver a stability rate of over 90%. The risk lies within the peripheral areas.

Metropolitan markets: stable

Tier-2 regions (yellow): 15% risk of default

The Tipping Point

ENIAC

Even a one-day delay results in progressively worse ratings. After 3.5 days, ratings fall to ~2 stars, with every second customer leaving a negative review. Delivery speed is the key driver of our brand perception.

Customer profile – Magist

Installment payments

Approximately 75% of customers with order values above €500 choose installment payments, reinforcing the strength and potential of our pricing strategy.

- ✓ High customer lifetime value enabled by financing
- ✓ Tech segment as the leading category

Growth potential

Growth Analysis – Revenue/Sales
MAGIST (BR), p.a., 2016–present

Scalable expansion without infrastructure risk

Magist achieved strong growth in its first two years of operation, enabling us to immediately serve 25+ states without investing capital in our own logistics infrastructure.

Strategic Roadmap

1

Pilot rollout

Focus on São Paulo and Minas
Gerais to safeguard brand value

2

Service Level Agreement Audit

Inclusion of a 3-day delay
deadline in the contract

3

Scale-Up

Tier-2 expansion under stable
logistics performance

4

Monitoring

Real-time tracking of delivery
performance
